

■■ \$GAF – GiveAF Whitepaper

■ Introduction

\$GAF (GiveAF) merges meme culture with real charitable impact. Every holder proves they GiveAF. Each milestone fuels donations to causes voted on by the community.

■ Tokenomics

■ Token Policy

- Mint authority retained under multisig for sustainability.
- New mints only after charity wallet is fully used.
- Capped at +250B per cycle, never exceeding 2T without 80% approval.
- All mint events are pre-announced, voted, and time-locked.

■ How Donations Work

1. Milestones unlock charity wallet tranches.
2. 90% → charity, 10% → dev/ops.
3. All donations published with receipts + tx hashes.

■ Roadmap

Phase 1 – Launch: Presale + Raydium pool, LP locked.

Phase 2 – First Donation at 10k holders.

Phase 3 – Growth: Partnerships, listings, meme campaigns.

Phase 4 – Sustainability: NFTs, merch, treasury votes, recurring donations.

■ Summary

\$GAF proves a meme coin can be viral, fun, and impactful. Community governance + transparent donations = memes with meaning.
